### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The claims have been amended in consistency with the BPAI decision as follows:

1-3 (Cancelled).

4. (currently amended) ~~The method as set forth in claim 3~~ A method of preventing reverse rotation in a spark ignited internal combustion engine having at least one spark plug fired by an ignition circuit and having an electrical generator driven by the engine and a starting device for cranking the engine for starting thereof, said method comprising the steps of permitting firing of the spark plug after the starting device is initially operated, determining after the starting has been initiated if the speed of the engine has decreased from a previously sensed speed sufficiently that the engine may be starting to rotate in a direction opposite to that desired, and thereafter preventing firing of the spark plug, wherein the speed of the engine is detected by the output of the electrical generator driven by the engine, wherein the firing of the spark plug upon starting is not permitted until the speed of the engine reaches a predetermined first value.

5. (Original) The method as set forth in claim 4, wherein the firing of the spark plug is prevented when the speed of the engine falls below a second predetermined value lower than the first predetermined value.

6. (Original).The method as set forth in claim 5, wherein once the firing of the spark plug has been prevented the spark plug is not permitted to fire again until another starting operation is initiated.

7. (Currently amended) ~~The method as set forth in claim 1,~~ A method of preventing reverse rotation in a spark ignited internal combustion engine having at least one spark plug fired by an ignition circuit and having an electrical generator driven by the engine and a starting device for cranking the engine for starting thereof, said method comprising the steps of permitting firing of the spark plug after the starting device is initially operated, determining after the starting has been initiated if the speed of the engine has decreased from a previously sensed speed sufficiently that the engine may be starting to rotate in a direction opposite to that desired, and thereafter preventing firing of the spark plug, wherein the engine ignition system includes a timing mark driven by an engine shaft and a pulser coil for providing an output signal in response to the position of the timing mark to determine the time of firing the engine and the ignition of the spark plug is not permitted until the pulser coil outputs a first signal.

8. (Original) The method as set forth in claim 7, wherein the speed of the engine is detected by the output of an electrical generator driven by the engine.

9. (Original) .The method as set forth in claim 8, wherein the firing of the spark plug upon starting is not permitted until the speed of the engine reaches a predetermined first value.

Art Unit: 3747

10. (Original) The method as set forth in claim 9, wherein the firing of the spark plug is prevented when the speed of the engine falls below a second predetermined value lower than the first predetermined value.

11. (Original) The method as set forth in claim 10, wherein once the firing of the spark plug has been prevented the spark plug is not permitted to fire again until another starting operation is initiated.

12-13. (cancelled)

14. (Currently amended) An ignition and anti reverse running system as set forth in claim 13 for an internal combustion engine comprising a pulser coil for generating a pulse in response to the passage of a timing mark associated with a shaft driven by the engine, an ignition circuit for receiving the pulse and initiating the firing of a spark plug of the engine, an ignition preventing circuit for preventing the firing of the spark plug by said ignition circuit when the speed of the engine falls below a predetermined speed after the engine has been initially cranked for starting thereof, wherein the engine drives an electrical generator and the speed of the engine is determined by the output of said electrical generator, wherein the ignition circuit is prevented from firing the spark plug by the ignition preventing circuit until the speed of the engine reaches a predetermined first value and the firing of the spark plug is prevented when the speed of the engine falls below a second predetermined value lower than said first predetermined value.

15. (Cancelled)

16. (Currently amended) An ignition and anti reverse running system as set forth in claim 15 for an internal combustion engine comprising a pulser coil for generating a

pulse in response to the passage of a timing mark associated with a shaft driven by the engine, an ignition circuit for receiving the pulse and initiating the firing of a spark plug of the engine, an ignition preventing circuit for preventing the firing of the spark plug by said ignition circuit when the speed of the engine falls below a predetermined speed after the engine has been initially cranked for starting thereof, wherein the electrical generator has a plurality of phases and the speed of the engine is determined by a summing circuit that sums the output of at least two of said phases, wherein the summing circuit comprises reverse current preventing diodes each receiving the output of a respective phase of the electrical generator, a capacitor charged by the electrical generator output, and a resistor connected between the capacitor and a reverse revolution discriminating circuit.

17. (Original) An ignition and anti reverse running system as set forth in claim 16. wherein the reverse revolution discriminating circuit comprises a flip-flop circuit connected to a pulse receiving circuit receiving the output of the pulser coil and a transistor circuit connected between said flip-flop circuit and the resistor of the summing circuit.
